DIETS FOR HEALTHY ADULT PETS

Your vet has suggested that your pet may benefit from this diet, for adult pets – here is how diet can help.

These diets are made with high levels of fish and other marine ingredients.

Fish is a very high quality protein. Fish is highly digestible; low in saturated fats and is well-balanced, meaning it has the right mix of amino acids for the body's needs.

Fish is also a rich source of EPA and DHA omega-3 essential fatty acids that support joints, skin and coat.

Moderate energy levels in these diets help maintain ideal body weight.

The cat diets have moderate magnesium and phosphorous levels to support a healthy urinary tract.
